

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of claims:**

Claim 1-9 (canceled).

Claim 10 (new): A speaker-dependent voice recognition method with a voice recognition system, the method comprising:

providing that voice utterances of a user are trained and commands are assigned to the trained voice utterances; and

providing the user, upon non-recognition of a voice utterance and via the voice recognition system, an opportunity to immediately assign the voice utterance to a new command.

Claim 11 (new): A speaker-dependent voice recognition method as claimed in Claim 10, wherein, upon the non-recognition of the voice utterance by the voice recognition system, the user may one of repeat the voice utterance and assign a new command to the voice utterance.

Claim 12 (new): A speaker-dependent voice recognition method as claimed in Claim 10, wherein if no command has yet been assigned to a voice utterance, the voice recognition system, after having been activated, offers the training of a new command.

Claim 13 (new): A speaker-dependent voice recognition method as claimed in Claim 10, wherein upon the non-recognition of a voice utterance for a command already trained by the voice recognition system, the user may select the command and assign the voice utterance to the selected command.

Claim 14 (new): A speaker-dependent voice recognition method as claimed in Claim 10, wherein for recognition of a voice utterance, a voice pattern is generated which is assigned to the voice utterance.

Claim 15 (new): A speaker-dependent voice recognition method as claimed in Claim 10, wherein before a command is assigned to a voice utterance, a check is carried out to determine whether the voice utterance is similar to previously stored voice utterances.

Claim 16 (new): A voice recognition system for a speaker-dependent recognition of voice, comprising:

a voice recording device for recording a voice utterance of a user of the voice recognition system;

a search engine for accessing a database which contains an assignment between voice utterances and commands in order to find a command assigned to the voice utterance; and

a conversion device for converting the command found due to the voice utterance, wherein upon non-recognition of the voice utterance, the voice recognition system provides the user with an opportunity to immediately assign the voice utterance to a new command.

Claim 17 (new): A voice recognition system as claimed in Claim 16, wherein the voice recording device is connected to a memory in which the voice utterance is temporarily stored and which is connected to the database for reading the voice utterance into the database.

Claim 18 (new): A voice recognition system as claimed in Claim 16, further comprising a feature extraction device for generating a voice pattern from the voice utterance, the feature extraction device being arranged between the voice recording device and the memory, with the voice pattern replacing the voice utterance.
